

# Nursing Home Sewage Monitoring and Control

## Application Summary:

Customer needed to monitor and control various pump stations related to sewage handling at their nursing home facility located in a rural area.

## Solution:

Customer installed an EZ-Bridge<sup>®</sup>LT2+ AP unit at his main head office location and three satellite EZ-Bridge<sup>®</sup>LT2+ Client units at his monitoring and control stations. This created a secure and reliable high-speed network between all locations. There is a control panel at the main location which allows for monitoring and control of the entire system.

## Conclusion:

The EZ-Bridge<sup>®</sup>LT2+ product offered a cost effective solution for linking multiple stations, containing industrial sensing and control apparatus, allowing the customer full monitoring and control capabilities from their central office.
